

The AI layer that helps banks understand their **customers**.

Finous is a financial intelligence platform that gives banks and NBFCs a complete, real-time view of their customers' financial lives – and uses AI to turn that view into actionable recommendations. Built on RBI's Account Aggregator, it deploys in **6–8 weeks** and drives engagement, cross-sell, and retention.

1,500+

Urban Co-op Banks
RBI Regulated

On Account Aggregator

B2B — The Core Business

White-labelled SaaS platform for banks and NBFCs. Their customers get a unified dashboard, AI advisor with complete financial context, and proactive recommendations – all inside the bank's own app. **Every recommendation routes to the bank's own products first.**

B2C — The End-User Experience

For the customer, Finous is the **first time they see all their accounts in one place** – bank balances, loans, investments, credit cards. The AI advisor answers in Hindi and English, tells them how to save money, and surfaces relevant offers. A **complete financial picture** – for free.

REVENUE STREAMS

Insurance POSP

% of first-year premium

THE MOAT

Proprietary AI model. Purpose-built for Indian finance, trained on real user interactions. **More relevant, more accurate, and significantly cheaper** than generic LLMs – a defensible moat that grows stronger with every user.

MARKET OPPORTUNITY

India first, then the world. 1,500+ cooperative banks and 9,000+ NBFCs lack the resources to build their own AI layer. Finous gives it to them **in weeks, not years**. Once proven, the same playbook applies to credit unions in the US, Volksbanken in Germany, and co-operative banks across Southeast Asia.
