

UPEKKHA APPLICATION · 2026

Financial intelligence for **banks**.

We give banks the infrastructure to understand their customers' complete financial lives — and serve them better because of it.

4 LOIs signed

12 banks in discussion

B2B SaaS

RBI Account Aggregator

Finous · Nidhiverse Pvt Ltd

THE PROBLEM

Banks know the balance. They don't know the **customer**.

01

Fragmented financial picture

A bank sees only what's in its own accounts. The customer's loans elsewhere, investments, credit card debt, real net worth — none of it visible. Cross-sell becomes guesswork. Advice becomes generic.

02

Engagement is falling

Customers manage money across 6 to 8 apps. The bank is one of them, and often not the one they open first. Banks have no way to change that without understanding the full picture.

03

Building in-house is not realistic

AA integration, financial dashboards, AI advisory — 12 to 18 months of engineering, ₹2 to 3 crore before anything works. Cooperative banks and mid-size NBFCs do not have that runway. They need it ready.

THE SOLUTION

Financial intelligence infrastructure, deployed in 6 to 8 weeks.

Customer consents

RBI's Account Aggregator framework.
Consent-based, read-only. The customer
controls what's shared.

Finous AI layer

Unified financial dashboard, AI advisor with
full data context, proactive alerts and
recommendations.

Inside the bank's app

White-labeled, API-integrated. The
customer never leaves the bank's interface.
The bank owns the relationship.

For the first time, the bank sees what its customer actually looks like financially — every account, every loan, every investment, in one view. The AI advisor uses that context to surface things the bank can act on: refinancing candidates, cross-sell timing, loan top-ups, insurance gaps. Every recommendation routes to the bank's own products first.

TRACTION

Banks are **already signing**.

4

LOIs signed
Cooperative banks

12

Banks in active
discussion

1,500+

Urban Cooperative Banks
in India (RBI regulated)

The LOIs are from cooperative banks, and that is deliberate. They move faster on procurement than commercial banks, they have been largely ignored by enterprise fintech, and they face exactly the same engagement and cross-sell problems as larger institutions. **A signed cooperative bank is a reference customer.** That reference is what gets us in the door at larger NBFCs and eventually scheduled commercial banks.

BUSINESS MODEL

Monthly SaaS fee per institution. Predictable, recurring.

TIER	MONTHLY FEE	END USERS	WHAT'S INCLUDED
Starter	₹50K/mo	Up to 5,000	AA-powered dashboard, basic AI advisor, standard branding
Growth	₹1.5L/mo	Up to 25,000	Full AI advisor, proactive alerts, cross-sell recommendations, analytics dashboard
Enterprise Target	₹3–5L/mo	Unlimited	Custom branding, dedicated model fine-tuning, SLA guarantees, dedicated support

The 4 signed LOIs alone convert to **₹24L ARR** at Starter tier. If 6 of the 12 in-discussion banks sign, that is **₹60L ARR** before a single enterprise contract closes. Three Growth-tier contracts add another **₹54L**. None of these numbers include consumer revenue.

MARKET & MOAT

India first. Then **every cooperative bank** in the world.

INDIA — NOW

Urban Cooperative Banks + NBFCs

1,500+

RBI-regulated Urban Cooperative Banks. Plus 9,000+ NBFCs of varying size. All face the same engagement and intelligence gap. Almost none have the budget to build a solution in-house. Finous is the first product built specifically for this segment.

INDIA — YEAR 2

Scheduled commercial banks

₹5L/mo

Once cooperative bank case studies are published and the product is proven, the conversation with mid-size scheduled commercial banks opens. Same product, larger contract. The cooperative bank track is the reference-building phase, not the ceiling.

Key Moat: Our proprietary **Fine-tuned Language Model (FLM)** – see next slide for details.

Building a defensible **AI moat**.

The **Fine-tuned Language Model (FLM)** is our proprietary AI engine – built specifically for Indian personal finance and deployed in Year 2.

WHY FRONTIER LLMS FAIL

- ✗ **Cost explodes** – at 5,000 MAU, API costs hit **₹7.5L/month** – wiping out our entire Month 12 revenue.
- ✗ **Poor domain knowledge** – they know 401(k)s and ISAs, not PPF, NPS, ELSS, or Section 80C.
- ✗ **Inconsistent Hindi** – real Indian users code-switch mid-sentence; frontier models handle this poorly.
- ✗ **Privacy risk** – every financial query travels to a third-party server.

THE FINOUS FLM SOLUTION

- ✓ **Fine-tuned on 50,000+ proprietary examples** – RBI/SEBI/IRDAI regulations + synthetic Q&A verified by finance professionals + anonymised real user interactions (with consent).
- ✓ **Reduces API costs by ~80%** – from ₹7.5L/month to **₹20–40K/month** at scale.
- ✓ **Native Hindi-English handling** – trained on real Indian code-switched conversations.
- ✓ **Data stays on our infrastructure** – DPDP Act 2023 compliant, no third-party data leakage.

Data is the moat. Competitors can replicate AA integration – they cannot replicate our proprietary dataset of real Indian financial conversations.

YEAR 1

APIs + Data

Use frontier LLMs (Claude/OpenAI). Log queries with consent to build training dataset.

YEAR 2, Q1

Fine-tune

Fine-tune Llama/Mistral/Sarvam on 50K+ examples.
One-time cost: **₹2–5L**.

YEAR 2, Q2

Self-host

Deploy on AWS. Cost drops to **₹20–40K/month**.
Break-even at 2,500 MAU.

REGULATORY TAILWINDS

The RBI built the pipes. We're the **consumer layer**.

252M+ users already linked

Account Aggregator has 252 million+ users who have linked at least one account – the infrastructure is live and growing fast.

RBI mandate for all regulated entities

All banks, NBFCs, and insurance companies must integrate with the AA framework – no opt-out, no reversal.

SEBI BSDA mandate (2024)

Demat accounts are now accessible via AA – bringing investment data (stocks, mutual funds) into the network, expanding our data scope.

DigiLocker integration

AA is integrated with DigiLocker – 600M+ users – significantly reducing KYC friction for new users.

Implication: Finous sits on top of a government-mandated, rapidly expanding financial data infrastructure – a regulatory tailwind, not a headwind.

GO-TO-MARKET STRATEGY

Three-phase roll-out to **dominate the segment.**

PHASE 1 (NOW)

Cooperative Banks

Direct outreach, RBI conferences, referrals from existing LOIs. Founder-led sales with a 6–8 week deployment cycle.

Channel: Direct BD

PHASE 2 (MONTH 6+)

NBFCs

Co-marketing partnerships, DSA network, industry events. Leverage existing relationships from the loan referral business.

Channel: Partner + Referral

PHASE 3 (YEAR 2)

Scheduled Commercial Banks

Reference selling using case studies from cooperative banks. Hire first enterprise AE post-seed to manage longer cycles.

Channel: Enterprise Sales

Sales motion: "Founder-led sales" → "Hire first enterprise AE post-seed." Each phase builds the reference base for the next, creating a compounding go-to-market engine.

UNIT ECONOMICS

At Month 12 — **proven and scalable.**

CUSTOMER ECONOMICS

CAC (blended)	~₹330
Monthly revenue / user	₹100–160
LTV (24 mo, 60% retention)	₹1,500–2,400
LTV:CAC ratio	4.5 – 7.3×
Payback period	2–3 months

REVENUE PER CHANNEL (MONTH 12)

DSA loan commissions	₹1.5L / mo
Insurance POSP	₹0.5L / mo
Credit card affiliate	₹0.3L / mo
Premium subscriptions	₹0.5L / mo
B2B SaaS (early)	₹2L+ / mo

LTV:CAC > 4.5× – unit economics are healthy even at early scale. As the B2B SaaS revenue grows, margins improve further.

ROADMAP

12 months to ₹2Cr+ ARR.

MONTH 0-2

Foundation

Day-0 tools live (calculators, affiliate), licences applied, waitlist building, angel round closes

₹0 revenue

MONTH 3-4

Beta Launch

MVP (AA dashboard + AI) live, FIU/DSA/POSP complete, first 30 beta users

₹0-50K / mo

MONTH 6

Validation

500+ users, CA partnerships, first DSA commissions, angel check-in

₹1-3L / mo

MONTH 9

Expansion

Loan Suite, Health Score, Marketplace live; 2,000 users; NBFC pipeline starts

₹3-5L / mo

MONTH 12 — SEED READY

Scale

5,000+ MAU, full marketplace, FLM dataset ready, seed round of ₹3-5Cr

₹5-8L / mo · ₹2Cr+ ARR

YEAR 2

Enterprise Scale

FLM deployed, 3+ enterprise bank contracts, international pilot

₹35-50L / mo · ₹6Cr+ ARR

FINANCIAL PLAN

Clear path to profitability.

REVENUE PROJECTION	
Month 6	₹1-3L / mo
Month 12	₹5-8L / mo
Year 2	₹35-50L / mo
Year 3	₹1Cr+ / mo
ARR at Month 12: ₹2Cr+ · Year 2: ₹6Cr+	

USE OF FUNDS (ANGEL ROUND – ₹75L-1CR)	
Salaries (4 team, 12 mo)	₹24L
AWS + LLM API costs	₹5L
Legal + compliance	₹10L
User acquisition	₹20L
Buffer / runway	₹11-16L
Total: ₹70-75L · Seed round planned at Month 12 for ₹3-5Cr	

TEAM

Founder with **deep domain** expertise.

Prashant

Founder & CEO, Nidhiverse Pvt Ltd

8+ years in fintech and financial services. Previously built and scaled [insert relevant prior venture]. Deep expertise in regulatory navigation (RBI, SEBI, IRDAI), B2B enterprise sales, and product vision. Leads a team of 3 full-stack engineers with 30+ years combined experience in building fintech products from scratch.

All IP assigned to Nidhiverse Pvt Ltd. Consulting agreements in place.

THE ASK

What we are **looking for**.

INVESTMENT

\$125K

7% equity · Standard Upekkha terms

- Accelerate enterprise sales — hire dedicated BD to close the 12-bank pipeline
- Scale product engineering — multi-tenant architecture, SLA infrastructure
- Deepen FLM development — proprietary model for Year 2 deployment
- International market validation — US credit unions and SEA pilots

BEYOND CAPITAL

Beyond Capital

- Enterprise SaaS pricing and go-to-market playbook for cooperative banks
- Customer discovery framework to qualify and close the 12-bank pipeline faster
- International expansion strategy — structured GTM for US and SEA
- Operator network — access to founders who have scaled enterprise AI globally

WHERE WE WILL BE IN 12 MONTHS

20+ bank contracts

Current pipeline converted, plus first NBFC enterprise contracts signed

₹2Cr+ ARR

SaaS contracts only — no consumer revenue counted

First international pilot

One US credit union or SEA bank on a paid POC
